The Amada press brake safety illustrations below are a good visual guideline for the safe operation of Promecam Machines Use pliers or any other tooling to help bend small dimension or small width parts. Never place your fingers near the punches. Remove your hands from the part to be bent after the latter has been pinched between the tools.

The Operateur is a CNC control that was totally developed by Amada - Promecam. It controls all aspects of the HFB press brake yet it is simple to use and it is aesthetically and ergonomically designed. This control includes an integrated maintenance program that can be accessed from the PC through a DNC cable.

AMADA's Fixed Height (AFH) press brake tooling reduces setup time, limits clamp interference and creates precise bend angles. AFH tooling utilizes punch profiles that are taller and narrower providing a larger part bending area. Multiple punch and die profiles have a common height, making brake setup fast and stage bending easy.
