Biodiversity is not evenly distributed, rather it varies greatly across the globe as well as within regions. Among other factors, the diversity of all living things depends on temperature, precipitation, altitude, soils, geography and the presence of other species. The study of the spatial distribution of organisms, species and ecosystems, is the science of biogeography.

Our planet's diverse, thriving ecosystems may seem like permanent fixtures, but they're actually vulnerable to collapse. Jungles can become deserts, and reefs can become lifeless rocks. What makes one ecosystem strong and another weak in the face of change? Kim Preshoff details why the answer, to a large extent, is biodiversity.

## *Why is biodiversity so important? - Kim Preshoff | TED-Ed*

An important component of health is a balanced diet. About 7,000 species of plants and several hundred species of animals have been used for human food consumption at one time or another. Some indigenous and traditional communities currently consume 200 or more species. Wild sources of food remain particularly important for the poor and landless to provide a somewhat balanced diet (C6, C8.2.2).

## *2. Why is biodiversity loss a concern? - GreenFacts*

In the traditional view of conservation, people play one of two roles: The vast majority of people are a threat to biodiversity,

# Read PDF Biodiversity Conservation Multiple Choice Questions And Answers

and a relatively small number—mostly Western biologists—act as biodiversity's protectors and, one hopes, saviors (e.g., Janzen 1986). Looking back on the last 25 years of conservation successes and failures, we ...
