A sphygmomanometer, also known as a blood pressure monitor, or blood pressure gauge, is a device used to measure blood pressure, composed of an inflatable cuff to collapse and then release the artery under the cuff in a controlled manner, and a mercury or aneroid manometer to measure the pressure. Manual sphygmomanometers are used with a stethoscope when using the auscultatory technique.

Pressure Washers: Amazon.co.uk

Manually measuring your blood pressure is a bit of a complicated process. To begin with, you will first need a sphygmomanometer, which consists of a blood pressure cuff along with an aneroid monitor and a squeezable balloon for inflating and deflating the cuff. You will also need a stethoscope. An aneroid monitor is simply a number dial.

Manual Blood Pressure Monitors Lumiscope 100-021 Manual Blood Pressure Monitor. A manual Blood Pressure Monitor consists of four main components: the cuff, the aneroid gauge, the bulb, and a stethoscope. It is important to consider whether the patient will be taking their own blood pressure, because a manual unit can be difficult if not impossible to maneuver alone.
