A Pelton wheel is an impulse-type water turbine invented by American inventor Lester Allan Pelton in the 1870s. The Pelton wheel extracts energy from the impulse of

moving water, as opposed to water's dead weight like the traditional overshot water wheel. Many earlier variations of impulse turbines existed, but they were less efficient than Pelton's design. Water

The pelton wheel turbine is comprised of three basic components that include the stationary inlet nozzle, the runner and the casing. The

multiple buckets form the runner. They are mounted on a rotating wheel. They are shaped in a manner that divides the flow in half and turn in a velocity vector that is nearly 180degrees.

PELTON TURBINE - TecQuipment

The Pelton turbine is a type of impulse turbine; such turbines convert the pressure energy of water into kinetic energy entirely in the distributor. During

Where To Download Pelton Turbine Lab

the conversion, the water jet is accelerated in a nozzle and directed onto the blades of the Pelton wheel tangentially. The water jet is redirected by approximately 180° in the blades.
