It contains 6794 training and 5674 test question-answer pairs, based on images from the NYU-Depth V2 Dataset. That means about 9 pairs per image on average. Although it is a great initiative, the NYU dataset contains only indoor scenes with, sometimes, lightning conditions that make it difficult to answer the questions.

Question-Answering systems (QA) were developed in the early 1960s. Two of the earliest QA systems, BASEBALL and LUNAR were successful due to their core database or knowledge system. Designed to answer questions about the US baseball league over a period of one year, BASEBALL easily fielded questions like where did each team play on July 7 .
