Definition 1 (Group). A group  $(G, ?)$  is a set  $G$  equipped with a binary operator such that the following holds: 1. (Closedness)  $a?b \in G$  for all  $a, b \in G$ . 2. (Associativity)  $a?(b?c) = (a?b)?c$  for all  $a, b, c \in G$ . 3. (Existence of identity) There is some  $e \in G$ , such that  $e?a = a?e = a$  for all  $a \in G$ . 4. (Existence of inverses)

## Problems in Group Theory

Solutions Manual This page contains the solutions for the end-of-chapter problems given in Prof. Robert Carter's book, "Molecular Symmetry and Group Theory". Each chapter is given as a separate PDF file, requiring the Adobe Acrobat Reader. Book Cover Table of Contents Chapter 1 Chapter 2 Chapter 3 Chapter 4 Chapter 5 Chapter 6 Chapter 7 Errata

## Solutions Manual - University of Massachusetts Boston

group is abelian, so  $G$  must be abelian for order 5. 10. Show that if every element of the group  $G$  has its own inverse, then  $G$  is abelian. Solution: Let some  $a, b \in G$ . So we have  $a^{-1} = a$  and  $b^{-1} = b$ . Also  $ab \in G$ , therefore  $(ab)^{-1} = b^{-1}a^{-1} = ba$ . So we have  $ab = (ab)^{-1} = ba$ , showing  $G$  is abelian. 11. If  $G$  is a group of even order, prove it has an element  $a \neq e$  satisfying  $a^2 = e$ .

Group Theory is a mathematical method by which aspects of a molecules symmetry can be determined. The symmetry of a molecule reveals information about its properties (i.e., structure, spectra, polarity, chirality, etc...). Group theory can be considered the study of symmetry: the collection of symmetries of some
