It explains how to solve or answer any Subnetting related question in less than a minute with 50+ Subnetting examples. VLSM Subnetting Explained with Examples. This tutorial is the fifth part of the article. It explains what VLSM Subnetting is and how it is done step by step including differences between FLSM Subnetting and VLSM Subnetting.

### *VLSM Subnetting Examples and Calculation Explained*

Quick Answer: 175 Detailed Answer: 178 Widget, Inc., uses the Class B address 172.30.0.0/16 to address its organization. The western region of the organization (shown in Figure 8.6) has been allocated the 172.30.32.0/20 block. As the administrator of the Phoenix office, you are required to allocate valid subnets to the HQ and three branch offices shown in Figure 8.6.

### *CCNA Exam Questions: Subnetting, VLSM, and IPv6 | Quick ...*

If you know how FLSM Subnetting works and how it is done, you already know the 90% of VLSM Subnetting. In FLSM, all subnets use same block size, thus Subnetting is required only one time. In VLSM, subnets use block size based on requirement, thus Subnetting is required multiple times. The concept of VLSM Subnetting is relatively simple. Select block size for each segment.

### *VLSM Subnetting Explained with Examples*

The subnet 192.168.1.224 /29 with the Mask 255.255.255.248 has exactly 6 valid host IP addresses. So this can be assigned to Management. The last octet of the subnet mask will contain 1111000. By using VLSM, the administrator can subnet the IP subnet in such a way that least number of IP addresses are wasted.

### *IPv4 - VLSM - Tutorialspoint*

For example, for the first scenario, let's say we have exactly 252 users total and we need to assign 126 users to the 1st subnet, and the other 126 users to the 2nd subnet, this works out perfectly because a subnet mask of 255.255.255.128, as we know, gives us exactly 126 usable addresses per subnet... that's great!... there is no much room for future growth though... hmm.

### *VLSM and Subnetting Practice. - BroadcastStormER*

A quick way to find out the correct answers is notice that all 255.255.255.x subnet masks will separate these two IP addresses into two separate subnets so we need a Layer 3 device here and each interface must require an IP address on a unique IP subnet -> A, C are not correct while B, D are correct.

### *CCNA 200-125 Exam: Subnetting Questions With Answers*

Through Fresherslive Subnetting questions and answers, you can acquire all the essential idea to solve any difficult questions on Subnetting in short time and also in short cut method. Winners are those who can use the simplest method for solving a question.

*Ccna Subnetting Questions And Answers | calendar.pridesource*

Because we have different subnet sizes, we need to calculate the subnet mask for each subnet. To find the subnet mask you can use this trick:  $256 - \text{subnet size} = \text{subnet mask}$ . Subnet 1:  $256 - 64 = 192$  so the subnet mask is 255.255.255.192; Subnet 2:  $256 - 32 = 224$  so the subnet mask is 255.255.255.224

*Variable Length Subnet Mask (VLSM) - NetworkLessons.com*

This quiz has been created to test your understanding of the number of Networks, Hosts, VLSM, and Reverse Engineering Subnets. Read the questions carefully and answer. So, let's try out the quiz.

Q1. Which of the following is true about VLSM? A. VLSM allows route summarization. B. VLSM makes less efficient use of IP addresses compared to fixed subnet mask addressing. C. VLSM can be implemented on both link state and distance vector routing protocols. D. VLSM is a Cisco proprietary technology. Correct Answer: A.

*VLSM (Variable Length Subnet Masking) - CCNA practice ...*

Like pick some random numbers for the amount of hosts you would need in each subnet. Then use VLSM to contiguously allocate the addresses. I haven't seen very many practice questions online that required you to do that. Like 522, 265, 300, 44, 69, 17, 2,2,2. Lets say you are given 172.31.0.0 /16 There you go, there is a practice VLSM question.

When you do this you are giving everyone else worldwide the answers. Yes, students look for answers this way. It also discourages others; myself included, from posting high quality materials.

*IP Addressing and Subnetting - Leaman*

Answer & Solution. Answer: Option B. Solution: The mask 255.255.254.0 (/23) used with a Class A address means that there are 15 subnet bits and 9 host bits. The block size in the third octet is 2 (256 - 254). So this makes the subnets in the interesting octet 0, 2, 4, 6, etc., all the way to 254.
